

## Animal Anatomy – Imaginatomy | Self-Study *Supply List*

- 1/8" armature wire, at least ten feet.
- Zap-A-Gap glue or DEVCON Crazy Glue
- Steel wire from OSH or Home Depot type hardware store, 24g, 28g. maybe 20g. Each student will make a unique project so the wire widths might vary.
- Note taking pad and drawing pad for ideation, usually 9"X12"
- Much of the materials to create the habitat are from hobby stores and craft stores. Since each person has to create an environment for their creature, each student must become familiar with stores that carry model making supplies, like for toy train hobbyists. I have a list of places plus business cards for stores that we have used in past classes and I give a list to everyone in the class the first day.
